*Iran University of Science and Technology
Department of Foreign Languages*

*The Effect of Syntactic Simplicity and Complexity
on Readability of the Text*

by:

Hedayat Eslami

*A thesis submitted in partial fulfillment of the requirements for the
degree of Master of Arts in Teaching English as a Foreign
Language in the Foreign Language Department of Iran
University of Science and Technology*

Advisor: Dr. H. Farhady

April 1999

***IN THE NAME OF
THE MOST HIGH***

DEDICATED TO:

My Father and Mother

ACKNOWLEDGEMENT

Words cannot express how much I owe to my respected professors during my study at the M.A. level, especially in writing the present thesis. In this regard, I would like to express my gratitude to several people who contributed to the accomplishment of this thesis.

First of all, I would like to express my deepest gratitude to Dr. Farhady who accepted the painstaking and arduous job of being my advisor. I am much obliged to him for his help in the selection of the topic for my thesis. In fact, the original idea was proposed by him. Without his invaluable guidelines from the selection of the topic to its completion, the accomplishment of this thesis would have not been possible.

Next, I would like to acknowledge Dr. Tabatabaie who tolerated the difficult job of going through my research report and editing it line by line. I am also thankful to him for the encouragement and motivation he gave me during my study in this university.

My thanks also go to Dr. Maftoon, Dr. Fallahi, and Dr. Bidahri who taught me and from whose guidelines I benefited during my study.

I am particularly aware of my debt to Mr. Rezaie, Faculty Member of Islamic Azad University-Maragheh branch, whose sincere cooperation and assistance in test administration and data collection was one of the major factors contribution to the accomplishment of this thesis.

I owe a lot to Mr. Ashrafi for his sincere cooperation and assistance in the statistical analysis of the data. I am also grateful to him for his assistance in the interpretation of the results of this study.

I am also grateful to a number of professors from different universities who cooperated with me in test administration and my special thanks in this regard go to Mr. Fartash, Mr. Shokrollahi, Mr. Ghafuri, Mr. Alavi, Mr. Bagheri, Dr. Mahmoodzadeh, Dr. Tajvidi, and Mis. Khayam.

And the last, but by no means the least, I would like to express my appreciation to my father and mother for their encouragement, support, and patience throughout my studies.

ABSTRACT

This study was an attempt to investigate the effect of syntactic complexity and syntactic simplicity on readability of text. To this end, a set of standard reading comprehension passages were syntactically modified in order to develop three different versions of the same text (Reduced, Original, Expanded) at different readability levels and with different syntactic characteristics. The two newly-developed tests were pretested in two phases with a sample of 139 students. The deficient items were revised. The reliability of tests, computed through KR-21 formula, turned out to be .73 and .76 for the Reduced and Expanded versions respectively, and the validity of the tests turned out to be .71 and .74 for the Reduced and Expanded versions respectively. In the next step, 257 students majoring in Teaching English as a Foreign Language, English Translation, and English Literature took the three Syntactically Different Reading Comprehension Tests (SDRCT). The results of a One-Way ANOVA run on the three groups revealed that there were significant differences among their performance. The correlations between the subjects' scores on the proficiency test and the three SDRCT turned out to be .77, .69, and .71 for the Expanded, Original, and Reduced versions respectively. In order to compare the performance of the homogeneous subjects on the three SDRCT, the subjects in each group were divided into three proficiency levels, Advanced, Intermediate, and Elementary, each taking three SDRCT. To determine which group, Reduced, Original, Expanded, performed better on each proficiency level, three separate One-Way ANOVA were conducted. The results revealed that: (a) For Advanced students, there was no significant differences among their performance on the three SDRCT. (b) For Intermedisate subjects, there was significant difference among the three groups. (c) For Elementary students, the results revealed that the subjects taking three SDRCT performed significantly differently from one another. The last statistical analysis was a

Two-Way ANOVA run to determine the degree of the interaction between three proficiency levels and three groups taking three SDRCT and to examine whether there were significant differences among three proficiency levels and three groups taking SDRCT. The results revealed that there was no interaction between these variables. It was concluded that, of the three SDRCT, the Expanded version was the most difficult version for Intermediate and Elementary students compared to Advanced students. Therefore, syntactic complexity seems to be a problem for Intermediate and Elementary students but not for Advanced students. On the other hand, syntactic simplicity seems to be useful only for Elementary students.

Chapter One

I. Introduction

Background

“Text difficulty or “text accessibility” is an important but much neglected topic in Applied Linguistics” (Fulcher, 1997, P.497). It has been an area of great concern for all who need to establish the appropriacy of a given text for a pedagogic purpose. In the last few decades, readability research in general has made rapid progress and the focus from a mechanical application of readability formulas has now shifted to the analysis of text structure and the processes involved in reading (Rye, 1984, cited in Agnihotri & Khanna, 1992).

A considerable body of research exists which has examined the text in detail and related its nature to the readability process. Particular attention has been focused on those features of text which cause difficulty to the readers (Anderson & Urqhart, 1984).

In addition, studies made from almost every point of view have examined almost every linguistic peculiarity of the language as
