Dedicated to

My Dear Supervisor

Professor Azarifar

Acknowledgments

I sincerely wish to gratitude my dear supervisor professor **Davood Azarifar** for all his useful helps and advices given through my research project.

I am greatly indebted to professor **Azarifar** for encouragements and sympathetic opinions that caused me many successful achievements. I am also gratfull to professor **Ardeshir Khazaei** as my advising professor for his constructive advices and helps during my studing of Bu-Ali Sina University. I also thank the following for reading this thesis and for their constructive criticism offered:

Professor Kazem Dindar Safa, Tabriz University, as external examiner.

Professor Naser Foroughifar, Arak University, as external examiner.

Professor Davood Habibi, Bu-Ali Sina University, as internal examiner.

Dr. Ramin Ghorbani-Vaghei, Bu-Ali Sina University, as internal examiner.

I am deeply indebted to professor **Mohammad Ali Zolfigol** for his interest in the development of me as researcher.

I also wish to thank all my friends and several of faculty members at Bu-Ali Sina University for their useful helps and services given to me concerning my Ph.D project. These include Dr. Sayen the chairman of chemistry department and his assistant Dr. Hashemi and Dr. Rafati.

Abstract

Azoles are an important group of five-membered heterocyclic compounds including pyrazolines, pyrazoles, 2-arylbenzothiazoles and 2-aryl-1-arylmethyl-1H-benzoimidazoles that have been studied in this thesis. In some cases in this work, the intermediate chalcones were first prepared from aldol condensation between the aromatic aldehydes and ketones in ethanolic NaOH solution. These chalcones were then reacted with nucleophilic reagent, like phenyl hydrazine in solvent-free under microwave irradiation in presence SiO_2 to yield the corresponding 2-pyrazolines upon cyclization. The aromatization of 2-pyrazolines to their pyrazoles by oxidation is a well known reaction in organic chemistry. A good range of 1,3,5-trisubstituted 2-pyrazolines were subjected to aromatization in the presence of various reagents such as N,N,N',N' -tetrabromo-benzene-1,3-disulfonamide [TBBDA], N,N' -dibromo- N,N' -1,2-ethanediylbis(*p*-toluenesulphonamide) [BNBTS], silica-supported *N*-bromosuccinimide [NBS], trichloroisocyanuric acid [TCCA], silica sulfuric acid-activated poly-1,3-dichloro-5-methyl-5(4-vinylphenyl)hydantoin [PDCVH], silica sulfuric acid-activated poly-1-bromo-5-methyl-5(4-vinylphenyl)hydantoin [PBVH], bismuth(III) nitrate pentahydrate, $\text{Bi}(\text{NO}_3)_3 \cdot 5\text{H}_2\text{O}$, sodium nitrite or sodium nitrate in acetic acid, $\text{ZrCl}_4/\text{WetSiO}_2/\text{NaNO}_2$, silica sulfuric acid/WetSiO₂/NaNO₂ or NaNO₃ and 4-(*p*-chlorophenyl)-1,2,4-tiazole-3,5-dione. 2-Arylbenzothiazoles have been synthesized by condensation of 2-aminothiophenol with aldehydes in various acids such as: acetic acid or silica sulfuric acid, bismuth(III) nitrate pentahydrate, $\text{Bi}(\text{NO}_3)_3 \cdot 5\text{H}_2\text{O}$, ZrCl_4 , and trichloroisocyanuric acid [TCCA], both under microwave irradiation (MW) and thermal conditions. Also, 2-aryl-1-arylmethyl-1H-benzoimidazoles were prepared from the reaction between *o*-aminoaniline and aldehydes using oxalic acid or acetic acid under microwave irradiation and thermal heating.

In conclusion, the advantages of the methods presented in this thesis are as follows:

- (i) the use of the inexpensive, readily available and non-toxic catalysts, (ii) easy workup of the products, (iii) improved yields and reduce time of the products, (iv) the use of relatively environmentally benign solvents such as: ethanol, acetic acid and water, (v) the experimental procedure is simple, and (vi) reduced pollution (formation of reactions in solid state).

Abbreviation

IBD	Iodobenzendiacetete
NHPI	<i>N</i> -hydroxyphthalimide
DBH	1,3-dibromo-5,5-dimethylhydantoin
TCCA.....	Trichloroisicyanuric acid
TBBDA	<i>N,N,N',N'</i> -tetrabromo- benzen -1,3-disulfonamide
BNBTS.....	<i>N,N'</i> -dibromo- <i>N,N'</i> -1,2-ethanediylbis (<i>p</i> -toluenesulphonamide)
NBS	<i>N</i> -bromosuccinimide
NCS	<i>N</i> -chlorosuccinimide
NIS	<i>N</i> -iodosuccinimide
PDCVH	Poly-1,3-dichloro-5-methyl-5 (4'-vinylphenyl)hydantoin
PBVH	Poly-1-bromo-5-methyl-5 (4'-vinylphenyl)hydantoin
BNP	Bismuth(III) nitrate pentahydrate
PBBS	Poly(<i>N</i> -bromobenzene-1,3-disulfonamide)
TADs	4-Substituted-1,2,4-triazoles-3,5-dione
SSA	Silica-sulfuric acid
MWI.....	Microwave irradiation
DMF	Dimethylformaldehyde
[PmIm]Br	1-Phenyl-3-methylimidazolium bromide
BTA.....	Benzothiazoles
PET.....	Positron emission tomography
OATB	Organic ammonium tribromide
[Hbim]BF ₄	1-Butylimidazolium tetrafluoroborate
[bbim]BF ₄	1,3-Di- <i>n</i> -butylimidazolium tetrafluoroborate
SCE	Sister chromatid exchange
K-10	Montmorillonite
SA.....	Sulfamic acid
SA.....	Sulfamic acid
<i>o</i> -PD	Ortho-phenylenediamine
[Hmim]BF ₄	1-Methylimidazolium tetrafluoroborate
