Acknowledgment

This document of work could not been achieved without the help of those around me. I wish to take this opportunity to express my thanks to a number of people who have influenced this work:

- *First and foremost, my supervisor, Professor Hassan Keypour, for giving me the chance to undertake this project and for his guidance, patience, constant support, continual encouragement, and for many other things.*
- *Deep acknowledgments are offered to the honourable members of the thesis committee; Prof. S. J. Sabounchei; Prof. N. Safari; Prof. S. Amani; Prof. M.A. Zolfigol and Assoc. Prof. S. Salehzadeh.*
- *I wish to thank all members of the academic and technical staff who made my stay at the Bu-Ali Sina University useful and enjoyable experience. I learn many things from you and for this and many other things you have my thanks.*
- *A debt of gratitude is due to the other members of the Prof. H. Keypour research group. I thank you all for your friendship, assistance and cooperation over the last several years.*
- *Deep acknowledgments are offered to my dear and honourable parents.*
- *Very special thanks must be go to my precious wife, who have been an absolute pillar of strength. I appreciate your understanding, patience, love and willingness to sacrifice during the course of this work.*
- *Lastly but not leastly, I would like to thanks my families, both in law and bloodline, for their undying support and faith in me.*

*Thanks for all the great times and helping me through. **I couldn't have done it without you.***

Abstract

Synthesis and characterization of macroacyclic and macrocyclic Complexes derived from various mono- and di- aldehydes and some polyamines in the presence of different metal Ions

By
Reza Azadbakht

In this project six new polyamine ligands and a number of novel complexes of corresponding macrocyclic and macro-acyclic Schiff-base ligands were synthesized and characterized.

Chapter 1: Introduction

Chapter 2: Polyamine ligands synthesis

Three new polyamine ligands of N1-(2-nitrobenzyl)-N1-(2-aminoethyl)ethane-1,2-diamine (L^1), N1-(2-nitrobenzyl)-N1-(2-aminoethyl)propane-1,3-diamine (L^2) and N1-(2-nitrobenzyl)-N1-(3-aminopropyl)propane-1,3-diamine (L^3) were synthesized and their complexes with cadmium (II) ion were prepared. Three new asymmetric tripodal tetraamine ligands, 2-((bis(2-aminoethyl)amino)methyl)benzenamine (L^4), 2-((2-amino-ethyl)(3-aminopropyl)amino)methyl)benzenamine (L^5) and 2-((bis(3-aminopropyl)amino-) methyl)benzenamine (L^6) were synthesized by reducing of the only nitro group of the relevant L^1 , L^2 and L^3 ligands, so that leading to asymmetrical tripodal ligands that contain one primary aromatic amine group and two primary aliphatic amine groups.

Chapter 3: Synthesis and characterization of N_3O_2 macrocyclic Schiff-base complexes with 2-nitrobenzyl side chain

The cyclocondensation of three polyamine ligands of L^1 or L^2 and/or L^3 with 2-[2-(2-formyl phenoxy)ethoxy]benzaldehyde in the presence of various

metal(II) ions were examined. These reactions only in the presence of a stoichiometric amount of cadmium(II) ion gave related cadmium(II) macrocyclic Schiff-base complexes. In the other cases no cyclic complexes have been obtained and metal(II) polyamines were the only products. The complexes have been studied with IR, ^1H NMR, ^{13}C NMR, DEPT, COSY, HMQC and microanalysis. The crystal structures of $[\text{Cd}(\text{NO}_3)(\text{L}^7)(\mu\text{-NO}_3)\text{Cd}(\text{NO}_3)(\text{L}^7)] 0.5\text{Cd}(\text{NO}_3)_4$ (1) (Fig. 3.1) and $[\text{CdL}^7(\text{NO}_3)(\text{CH}_3\text{OH})]\text{ClO}_4$ (2) have been also determined.

Chapter 4: macrocyclic Schiff-base complexes with 2-aminobenzyl pendant arm

[1+1] Macrocyclic Schiff-base complexes containing 1, 2-diphenoxyethane head units and 2-aminobenzyl pendant arm, were synthesized as $[\text{MnL}^{10}(\text{MeOH})](\text{ClO}_4)_2$ (1), $[\text{MnL}^{11}(\text{MeOH})](\text{ClO}_4)_2$ (2), $[\text{MnL}^{12}(\text{MeOH})](\text{ClO}_4)_2$ (3), $[\text{CdL}^{10}(\text{H}_2\text{O})](\text{NO}_3)_2$ (4) and $[\text{CdL}^{11}(\text{H}_2\text{O})](\text{NO}_3)_2$ (5) from the metal ion templated cyclocondensation reactions of 2-[2-(2-formylphenoxy)ethoxy]benzaldehyde with (L^4), (L^5) or (L^6) tripodal tetraamine ligands. The crystal structure determination of (1) and (5) showed that the complex cations that had formed consisted of a pentagonal bipyramidally coordinated Mn(II) and Cd(II) ions, centrally located in a N_3O_2 macrocycle, with one 2-aminobenzyl pendant arm and a solvent molecule in axial positions. The cadmium complexes (4 and 5) have been studied by IR, ^1H NMR, ^{13}C NMR, DEPT, COSY, HMQC and microanalysis.

Chapter 5: Macrocyclic ligand complexes containing pyridine moiety

Cyclocondensation of the asymmetric tripodal tetraamine ligand, 2-((bis(3-aminopropyl)amino)-methyl)benzenamine (L^6), in the presence of Ni(II), Cu(II) and Zn(II) ions, with 2,6-diacetylpyridine (DAP) were investigated. In the presence of Ni(II) ion, only a mono Schiff-base

macroacyclic complex was obtained but in the presence of Zn(II) and Cu(II) ions novel [14]-membered macrocyclic diimine Schiff-base complexes were the final products. Surprisingly, in both cases (Zn(II) and Cu(II)) metal ions 2-aminobenzyl unit is a part of macrocycle. The crystal structures of $[\text{CuL}^{14}](\text{ClO}_4)$ (2) and $[\text{NiL}^{15}](\text{ClO}_4)$ (3) were determined by X-ray diffraction. The zinc complex, $[\text{ZnL}^{14}](\text{ClO}_4)_2$ (1), has been studied by IR, $^1\text{HNMR}$, $^{13}\text{CNMR}$, DEPT, COSY, HMQC and microanalysis.

Chapter 6: Macroacyclic complexes.

$[\text{CdL}^{17}(\text{NO}_3)_2]$, $[\text{CdL}^{18}(\text{NO}_3)_2]$, $[\text{CdL}^{19}(\text{NO}_3)_2]$, $[\text{CoL}^{17}(\text{NO}_3)_2]$, $[\text{CoL}^{18}(\text{NO}_3)_2]$, $[\text{CoL}^{19}(\text{NO}_3)_2]$, $[\text{LaL}^{20}]\text{Cl}_3$ and $[\text{La}_2\text{L}^{21}]\text{Cl}_2$ macroacyclic Schiff-base complexes were prepared by template condensation of 2-pyridinecarboxaldehyde, salicylaldehyde or 3-methoxysalicylaldehyde with L^1 or L and/or L^3 in the presence of corresponding metal ions. The Cd(II) and La(III) complexes have been studied with IR, $^1\text{HNMR}$, $^{13}\text{CNMR}$, DEPT, COSY, HMQC and microanalysis. The complex $[\text{CdL}^{17}(\text{NO}_3)_2]$ (1) has been characterized through X-ray crystallography. In the complex 1 the Cd is in a six-coordinate environment comprised of the ligand N_4 -donor set and two oxygen atoms of two nitrate groups. In the case of reaction of 2-pyridinecarboxaldehyde and L_B (2.6.11.2) and Mn^{2+} one dication (9) compound was also synthesized and crystal structure of 9 has been determined with X-ray crystallography.

Chapter 7: Computational studies

As the crystal structure of some complexes could not be properly refined, we chose *ab initio* molecular orbital calculations to assess the structural parameters of these complexes in gas phase. We undertook a full geometry optimization at the LanL2MB, HF/3-21G* and 6-31G* levels of theory, by using LanL2DZ basis set for some of metal ions. We also undertook the same level of *ab initio* calculations for complexes that we refine the crystal

structures to observe the comparability of the predicted gas phase structural parameters with that determined in the solid state.

Fig. 2.1.	General structure of tetradentate tripodal ligand.	23
Fig. 2.2.	skeleton types of liner tetraamines.	35
Fig. 2.3.	Structure of $[\text{CdL}^1(\text{NO}_3)_2]$ (1) and $[\text{NiL}_B(\text{CH}_3\text{CN})_2](\text{ClO}_4)_2$ (4)	49
Fig. 3.1.	Structure of the cation $[\text{Cd}(\text{NO}_3)(\text{L}^7)(\mu\text{-NO}_3)\text{Cd}(\text{NO}_3)(\text{L}^7)]^+$	79
Fig. 3.2.	ORTEP depiction of $[\text{Cd}(\text{NO}_3)(\text{CH}_3\text{OH})\text{L}^7]^+$ (2) and similar complex (5)	80
Fig. 4.1.	Schiff-base macrocycles L^1 - L^6	95
Fig. 4.2.	Structures of the cations $[\text{MnL}^{10}(\text{CH}_3\text{OH})]^{2+}$ and $[\text{CdL}^{11}(\text{H}_2\text{O})]^{2+}$	110
Fig. 5.1.	Structures of the cations $[\text{CuL}^{14}(\text{H}_2\text{O})]^{2+}$ and $[\text{NiL}^{15}]^{2+}$	156
Fig. 6.1.	ORTEP drawing of the molecular structures of the complexes cation from $[\text{CdL}^{17}(\text{NO}_3)_2]$	187
Fig. 6.2 .	ORTEP drawing of the molecular structures of the dication, $\text{C}_{38}\text{H}_{32}\text{N}_8 (\text{ClO}_4)_2$	197
Fig. 7.1.	The ab initio optimized structure of the cation $[\text{NiL}_B(\text{CH}_3\text{CN})_2]^{2+}$.	210
Fig. 7.2.	The ab initio optimized structures of the cations $[\text{MnL}^{10}(\text{CH}_3\text{OH})]^{2+}$, $[\text{MnL}^{11}(\text{CH}_3\text{OH})]^{2+}$, $[\text{MnL}^{12}(\text{CH}_3\text{OH})]^{2+}$, $[\text{CdL}^{10}(\text{H}_2\text{O})]^{2+}$, $[\text{CdL}^{11}(\text{H}_2\text{O})]^{2+}$ and $[\text{CdL}^{12}(\text{H}_2\text{O})]^{2+}$	213
Fig. 7.3.	The ab initio optimized structures of the $[\text{Cd}(\text{L}^{17})(\text{NO}_3)_2]$ (1), $[\text{Cd}(\text{L}^{18})(\text{NO}_3)_2]$ (2) and $[\text{Cd}(\text{L}^{19})(\text{NO}_3)_2]$ (3)	216

List of Spectra

Spec. No. 2.1.	Infrared spectrum of N1-(2-nitrobenzyl)-N1-(2-aminoethyl)ethane-1,2-diaminetrishydrochloride (I) recorded as KBr pellet	219
Spec. No. 2.2.	^1H NMR spectrum of N1-(2-nitrobenzyl)-N1-(2-aminoethyl)ethane-1,2-diaminetrishydrochloride (I)	220
Spec. No. 2.3.	^{13}C NMR spectrum of N1-(2-nitrobenzyl)-N1-(2-aminoethyl)ethane-1,2-diaminetrishydrochloride (I)	221
Spec. No. 2.4.	Infrared spectrum of N1-(2-nitrobenzyl)-N1-(2-aminoethyl)propane-1,3-diaminetrishydrochloride (II) recorded as KBr pellet	222
Spec. No. 2.5.	^1H NMR spectrum of N1-(2-nitrobenzyl)-N1-(2-aminoethyl)propane-1,3-diaminetrishydrochloride (II)	223
Spec. No. 2.6.	^{13}C NMR spectrum of N1-(2-nitrobenzyl)-N1-(2-aminoethyl)propane-1,3-diaminetrishydrochloride (II)	224
Spec. No. 2.7.	^1H NMR spectrum of N1-(2-nitrobenzyl)-N1-(3-aminopropyl)propane-1,3-diaminetrishydrochloride (III)	225
Spec. No. 2.8.	^{13}C NMR spectrum of N1-(2-nitrobenzyl)-N1-(3-aminopropyl)propane-1,3-diaminetrishydrochloride (III)	226
Spec. No. 2.9.	^1H NMR spectrum of 2-((bis(2-aminoethyl)amino)methyl)benzenamine (L^4)	227
Spec. No. 2.10.	^{13}C NMR spectrum of 2-((bis(2-aminoethyl)amino)methyl)benzenamine (L^4)	228
Spec. No. 2.11.	^1H NMR spectrum of 2-((bis(2-aminoethyl)amino)methyl)benzenamine (L^4)+ D_2O	229
Spec. No. 2.12.	^1H NMR spectrum of 2-((2-aminoethyl)(3-aminopropyl)amino)methyl)benzenamine (L^5)	230
Spec. No. 2.13.	^{13}C NMR spectrum of 2-((2-aminoethyl)(3-aminopropyl)amino)methyl)benzenamine (L^5)	231
Spec. No. 2.14.	^1H NMR spectrum of 2-((bis(3-aminopropyl)amino)methyl)benzenamine (L^6)	232
Spec. No. 2.15.	^1H NMR spectrum of 2-((bis(3-aminopropyl)amino)methyl)benzenamine (L^6)+ D_2O	233
Spec. No. 2.16.	^{13}C NMR spectrum of 2-((bis(3-aminopropyl)amino)methyl)benzenamine (L^6)	234
Spec. No. 2.17.	Infrared spectrum of $[\text{CdL}^1(\text{NO}_3)]$ (1) recorded as KBr pellet	235
Spec. No. 2.18.	^1H NMR spectrum of $[\text{CdL}^1(\text{NO}_3)]$ (1)	236
Spec. No. 2.19.	^{13}C NMR spectrum of $[\text{CdL}^1(\text{NO}_3)]$ (1)	237
Spec. No. 2.20.	Infrared spectrum of $[\text{CdL}^2(\text{NO}_3)]$ (2) recorded as KBr pellet	238
Spec. No. 2.21.	^1H NMR spectrum of $[\text{CdL}^2(\text{NO}_3)]$ (2)	239
Spec. No. 2.22.	^{13}C NMR spectrum of $[\text{CdL}^2(\text{NO}_3)]$ (2)	240
